

# NEW BUSINESS WITH ECOPLUS INTERNATIONAL

## The only patented process for mould removal in the world

The BMB procedure is a dust-free, non-contact method for removing mould, algae and other organic substances from all absorbent substrates. The extraction and removal process penetrates centimetres deep into affected materials (indoor and outdoor walls, wood, etc.).

### Advantages of BMB

- BMB is licensed for use in the food industry and complies with all the European approvals
- treatment of open brick walls and wine cellars possible
- liquids applied and expelled are simply vacuumed up and removed from the interior spaces
- the pH value of the masonry remains unchanged
- no residue of hazardous substances
- as a rule no rectification work, such as painting, cleaning, chiselling, etc. is necessary

### Patented procedure

The emphasis is not on disinfecting and repainting, but on complete removal of the mould. The patented procedure from BMB makes it possible to dissolve out hazardous substances and toxins from deep layers of the masonry being treated. The BMB procedure is a dust-free, non-contact method of extracting the mould, since the liquids in the BMB procedure unleash a **micro-mechanical force** on the materials treated. Before and after samples from affected and treated objects are convincing – both in Austria and abroad.

### Success abroad

BMB has developed a distribution network structure covering the whole of Austria. With assistance from ecoplus International the network has been successfully expanded to Slovakia, the Czech Republic and Hungary.

### Are you in?

Are you interested in distributing the innovative BMB mould removal system?
